

# THANK YOU THUNDER BAY

---

30-May-08

Thank you to all of the people that have dropped off their used and abused computers to our shop. Here are the environmentally friendly statistics:

**30 monitors have been saved from the landfill.** While we were prepared to properly dispose of these non-functional monitors and pay the money to do this, we found a wonderful way of disposal that did not cost us a dime. ***Thank you Eco-Superior for your help and suggestions.***

**200 used or non-functional computers were collected.** 34 of these went back into service. We were able to upgrade them with parts from the other used computers. But these 34 are NOT going for recycling, because they are being reused.

The remaining **166 computers were recycled**, and this kept **527 kg of metal from senselessly going to the landfill.** They are being recycled, and because of our efforts, the metal is easily going into the manufacture of something else.

There is **approximately 30 grams of lead** and other toxic heavy metals in the average computer, and having our 166 computers going through the proper recycling procedure **we kept 4.98 kg of toxic metals from disturbing our environment.**

Remember, we believe in reducing, reusing and recycling.

If you have a used system that you wish to donate, please drop it off at:

**Mentor Computers  
250 South Algoma  
Thunder Bay, ON P7B 3C2**

We are open as early as 7:00 am !!!
